State Water Resources Control Board
P.O. Box 100
Sacramento, CA 95812-0100

**SUBJECT: COMMENT LETTER: RECYCLED WATER POLICY - MARCH 18, 2008,
BOARD MEETING**

Dear Chair Doduc and Members of the Board:

Ventura County Waterworks District No. 8 requests that the State Water Resources Control Board (Board) not adopt the draft Recycled Water Policy for California. While we had hoped that the revised Policy would help achieve the State's goal of removing barriers to use recycled water, we regrettably find ourselves faced with a draft Policy that, as written, does not accomplish this goal. For this reason, we urge the Board not to adopt the proposed Policy.

While we appreciate some of the revisions to the prior draft, such as removal of the requirement to provide financial assurances and the adjustment of the provisions relating to maximum total dissolved solids (TDS), a number of the policy provisions do not advance the goal of increasing the use of recycled water in California. A brief summary of these issues follows:

- The Policy allows Regional Water Boards to establish recycled water limits, based on narrative toxicity objectives, which are more stringent than drinking water standards, without a basis in science. The Policy undermines agencies' ability to plan for projects by introducing a level of uncertainty as to what limits might be established at what level, and what the costs could be.
- The Policy relies upon the current MOA process to resolve conflicts between the California Department of Public Health (CDPH) and the Regional Water Boards. This does not advance the cooperation between CDPH and the Regional Water Boards, which will be absolutely necessary to reach the State's established goals for recycled water use.
- While we appreciate the legitimate need for salinity management, we continue to believe that using a recycled water project application as a trigger for the preparation of salinity management plans is ineffective. The salt management plans are to be prepared in five years with the possibility of a five-year extension if significant progress is made, but there is no framework for determining progress, and our experience shows that it will take more than five years to prepare the plans.

- The Policy's approach to groundwater monitoring is unclear. One provision seems to imply monitoring is not needed, but other provisions give Regional Water Boards the authority to require monitoring under certain circumstances. This further contributes to the lack of clarity, which will frustrate project planning. In addition, this lack of clarity could undermine the cohesive development of the monitoring plans needed to truly support regional salinity management.
- The Policy establishes a 3 mg/L nitrogen threshold in recycled water for implementation of nutrient management practices and again, the Policy lacks clarity as to what is meant by "nutrient management practices".
- The SWRCB Policy presumes that local agencies can control water softeners to limit salts, which is not accurate—there are legal limitations and obstacles for prospective controls and no ability to retrospectively ban residential softeners. This real limitation on a local agencies' authority to conduct source control efforts must be recognized if the policy is to truly advance water recycling.
- The anti-degradation language does not adequately address the components of the Anti-degradation Policy, particularly with regard to defining prevention of nuisance and pollution, maximum benefit, and best practical treatment and control (BPTC). Without addressing this issue, the draft Policy cannot insure it will not unreasonably affect beneficial uses.
- The Policy includes numerous references to the Clean Water Act without explaining how the Act is relevant or applicable to recycled water irrigation and recharge. Once again, this uncertainty about the Policy's intent and what is intended by Clean Water Act compliance creates a regulatory environment that can frustrate the development of projects.

These issues must be satisfactorily addressed in order for our agency to support a Recycled Water Policy. Thank you for your consideration of our concerns.

Sincerely,

Mike Sedell
City Manager
